A legacy of comfort
The impeccable reputation of an American original
Amana brand heating and cooling systems are a part of the enduring legacy of one of America’s most recognized and respected brands. Originating eight decades ago in Amana, Iowa, the brand is synonymous with long-lasting, premium quality products — from home appliances to heating and air conditioning equipment. Chances are, you and generations before you have enjoyed the dependable performance and longevity the Amana brand continues to deliver.

Amana brand air conditioners

A vital component of an air conditioner, the compressor, has to do with how efficient it is, how reliable it is, etc. Typically, an air conditioner can run for 10 to 15 years, but that doesn’t give you much room for error. So it’s important to choose a brand you can trust.

Nearly all Amana brand air conditioners use a high-efficiency Copeland® scroll compressor. This scroll compressor has a very simple design, with fewer moving parts than reciprocating compressors. It doesn’t have valves and pistons, so it results in continuous compression and greater efficiency.

The difference is our inverter technology

Amana brand’s legacy of energy-efficient comfort systems continues with variable-speed inverter technology compressors. An inverter technology compressor functions much like a dimmer switch to a light bulb. With an inverter technology compressor, the speed levels are adjusted automatically to optimize the amount of energy required to maintain the temperature you have selected on the thermostat. When more power is needed the inverter technology increases the compressor’s speed. As the desired temperature is achieved, the inverter technology adjusts the speeds delivered to reject excess energy and maintain your indoor comfort. The result is lower utility bills compared to single speed compressors and more constant indoor comfort because the compressor is operating at full capacity all of the time.

Get the ultimate cool

We all want to be comfortable, right? Amana wants to make your life easier. That’s why we put a lot of thought into our indoor environments and not just in their design.

We take pride in the manufacturing of Amana brand products to ensure that they do their best to be as efficient as possible. Amana brand air conditioners and heat pumps are designed to be quiet, more efficient than a conventional air conditioner and a more efficient tube and a compact, cubed coil design that is lined up with the inverter technology. We’re proud of the fact that we’re one of the few brands that can offer high efficiency and quiet operation.

As you may know, homeowners in the market for a HVAC system want to be able to enjoy the comforts of home while also saving money. The 5mm copper tubing used in Amana brand air conditioners has a simple construction and heat pump advantages

For our single-family residential installations, Amana brand limited warranties may include the following:

- a Lifetime Unit Replacement Limited Warranty* on the compressor or heat exchanger for the original, registered homeowner (for as long as you own your home)
- 10-Year Parts Limited Warranty* on all functional parts

LIMITED WARRANTY PROTECTION

Comprehensive warranty details available from your local dealer or at www.amana-hac.com. To receive the Lifetime Unit Replacement Limited Warranty, you must: (1) originally purchase your Amana Brand product from your local dealer or at www.amana-hac.com (select models) within 90 days of installation, (2) print and complete the online warranty registration, (3) return the printed registration to the manufacturer within one year from installation. Online registration is not required in California or Quebec.

Comfort means quiet

Getting comfortable shouldn’t be a noisy proposition. The scroll compressors in Amana brand air conditioners have a simple design. They operate at lower sound and vibration levels than reciprocating compressors.

Also, we blamed the compressor with a high-density foam sound-reduction cover, and we rotated it on rubber cushions to absorb vibrations.
