ENERGY-EFFICIENT
AIR CONDITIONER

Up to 16 SEER Performance

The time for a comfort revolution has come! Replace your lackluster indoor comfort equipment and fight back against rising energy costs!

Demand an energy-efficient air conditioner that is designed to keep your home comfortable, even on the hottest days of the year. It's time to overthrow indoor heat and humidity and win the battle for long-term comfort.

Features and benefits:

High-Efficiency Compressor –

Designed to provide years of reliable cooling comfort, it provides up to 16 SEER cooling performance for lower energy bills compared to lower SEER compressors.

Single-Speed Condenser Fan Motor

– With advanced fan design, it provides dependable, quiet airflow across the condensing coil.

Efficient Cooling Capacity – Five millimeter, refrigeration-grade premium copper tubing and aluminum fin condenser coil configuration deliver outstanding heat transfer properties with R-410A, chlorine-free, refrigerant.

Heavy-Gauge, Galvanized Steel Enclosure Cabinet – A louvered cabinet protects the coil, while its appliance-quality, post-paint, baked enamel finish protects your system from outdoor elements.

Factory-installed In-Line Filter Drier

– Protects the refrigerant system from dirt and moisture for longer service life compared to units without filter driers.

It's time for a Liberty brand heating and cooling system!

Designed, engineered, and assembled in America

Where a home's heating and the cooling system comes from can be very important to you. That's why we're proud that every Liberty brand product is designed, engineered, and assembled in our manufacturing facility near Houston, TX, one of the largest facilities of its type in North America.

We believe in American dependability. Liberty brand units are designed, engineered and assembled in the U.S.A.

Smaller is smarter

Long ago the HVAC industry determined that the combination of copper tubing and aluminum fins provided the most efficient transfer of thermal heat available.

Today, the **Liberty** brand has improved upon this industry standard by making the condenser coil copper tubing smaller and smarter. The result is a heat pump unit that can offer high efficiency, use less refrigerant, and deliver money saving and energy-saving comfort to you for years and years.

Liberty's 5mm copper tube condensing coil design optimizes the heat transfer ability of R-410A refrigerant compared to standard 3/8" tubing.

Testing and quality

Liberty brand heating and cooling products are tested from the development phase through post-production to ensure every unit provides the company's best quality and value.

On the assembly line, we leak test every single unit multiple times during the manufacturing process and run test each and every unit before it's shipped from our facilities. We also employ the rigors of Six Sigma principles to constantly challenge ourselves to improve both our product design and our manufacturing processes.

We take great pride in all of our products, relying on strict quality-driven processes to help ensure that each component and the final assembled product meets or exceeds our customer's expectations.

We do all this because anything less would not be worthy of your quality standards.
