COILS

CURRENT R-410A & NEW R-32 PRODUCTS

IT'S ALL GOOD.

The indoor coil or evaporator coil is a crucial component of the refrigeration cycle.

When your home requires cool indoor air, the coil is cold and removes humidity as the indoor air passes over it. This makes the conditioned air feel cooler throughout your home.

When your home requires warm indoor air, the coil is warm and transfers heat to the air that passes over it. This makes the conditioned air feel warmer throughout your home.
